

Docker Image Registry - Detailed Guide

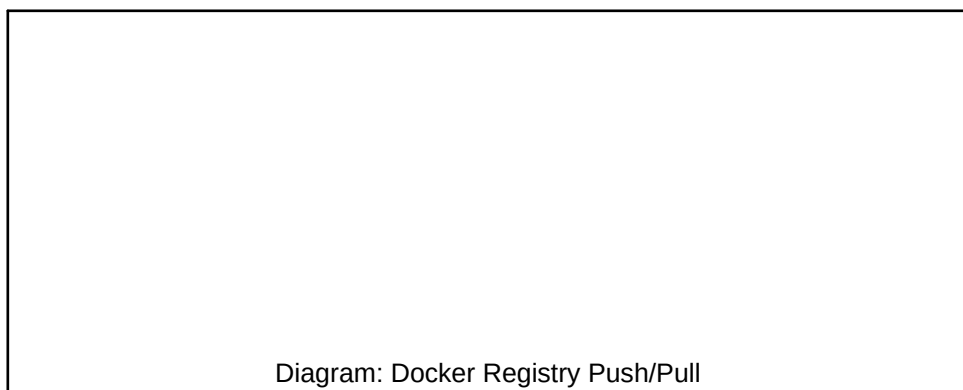

1. Docker Image

A Docker image is a lightweight package containing code, libraries, and dependencies.

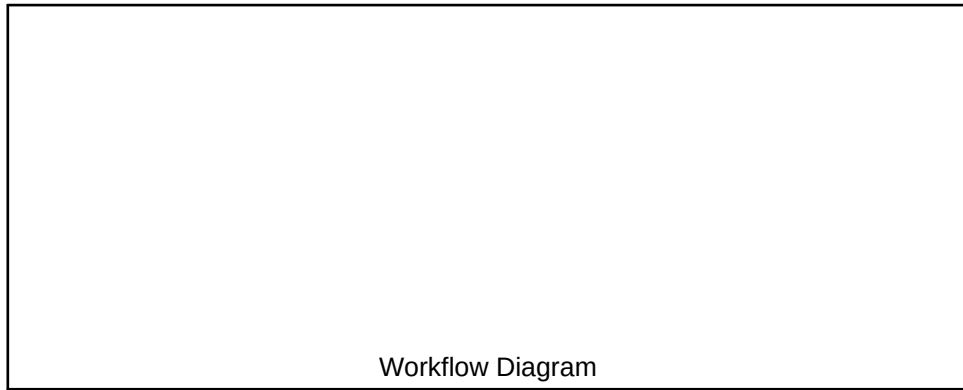

2. Docker Registry

A Docker registry is a centralized storage system to store and share Docker images.

3. Workflow

Build → Tag → Push → Pull → Run

Commands: `docker build -t myapp .` `docker tag myapp username/myapp` `docker push username/myapp` `docker pull username/myapp` `docker run username/myapp`

4. Key Concepts

Repository: Collection of images

Tag: Version of image

Layers: Optimized storage structure

5. Advantages

Fast deployment, version control, CI/CD integration, easy sharing

6. Use Cases

Microservices, cloud deployment, DevOps pipelines
